## **DETAILED ACTION**

### ***Election/Restrictions***

Newly submitted claims 13-16 are directed to an invention that is independent or distinct from the invention originally claimed for the following reasons:

Inventions of claims 13-16 and claims 1-12 are related as product and process of use (it is noted that the "apparatus" of claim 12 is wholly undefined therein). The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the product can be used in a process having the image receiving layer on an intermediate transfer medium.

Since applicant has received an action on the merits for the originally presented invention, this invention has been constructively elected by original presentation for prosecution on the merits. Accordingly, claims 13-16 are withdrawn from consideration as being directed to a non-elected invention. See 37 CFR 1.142(b) and MPEP § 821.03.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

Art Unit: 2861

- I. Claims 2-5 and corresponding dependencies of claim 12, drawn to an image recording method and apparatus involving manipulation of particular layers, classified in class 347, subclass 217.
- II. Claims 6-11, corresponding dependencies of claim 12 drawn to an image recording method and apparatus involving laser beam irradiation and focusing, classified in class 347, subclass 224.

Claim 1 is generic to both inventions.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as use in a method involving exposure to heat from thermal resistors. Further, invention II has separate utility such as use in a recording method involving use of an intermediate transfer sheet similar to the prior art of Figs. 14(a) through 14(f). See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Art Unit: 2861

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
